(b) if so, what is the quantum of shortage of power supply in the capital at present;

(c) whether Government plan to enhance the power supply to the Capital; and

(d) if so, the details thereof ?

THE MINISTER OF STATE OF THE MINISTRY OF POWER (SHRI KALP NATH RAI) : (a) to (d) Maximum demand of power in Delhi has reached 1536 MW in January, 1992. The power supply position in Delhi is by and large satisfactory. During the period April—Oct., 1992, availability of energy was 6124 million units against the requirements of 6168 million units. There was only a marginal deficit of 0.7%, which was met by suitable load management and imposing peak load restrictions on industries. Load-shedding on certain occasions becomes necessary to safeguard the system parameters of the Northern Grid against low voltage and low frequency conditions. Plans to enhance the power supply to the capital include installation of 3x34.07 MW Waste Heat Recovery Units at the existing Gas Turbines, setting up of 600/800 MW Gasbased power station at Bawana and construction of 400 KV Transmission Ring around Delhi for drawing additional power from the Northern Grid. Delhi will also get 90% of power from the 840 MW National Capital Thermal Power Project coming up at Dadri.
